

## **Fast-acting, NTC Thermistor sensors**

Long acknowledged as the world's leading-edge NTC manufacturer, SeMitec's range of fast-acting thermistor sensors offers unique solutions to the electronics industry.

Cost-effective, mini TO-220 style packages with R25s from 1k $\Omega$  to 100k $\Omega$  can be mounted directly to the p.c.b. or fitted with flying leads. Exposed bead sensors monitor and control rapid air-flow and "Soft-touch" sensors operating to 200°C offer T.C.s down to 0.5s.

The latest NC sensor reacts quickly to IR output in non-contact applications where thermopiles would be restricted by high local ambients.
